Your Window Into German And European Markets – One Source For High Quality Products

TRACO Export-Import GmbH is interested in cooperation with companies who intend to import or use our product groups mentioned below. We will assure you a reliable and trustful partnership to meet all requirements which are due to your special markets of flexible pneumatics. To give some understanding what we are doing we would like to introduce our company as follows:

TRACO was founded in 1979 as trading company supplying **machine elements** and **spare parts** into Europe and Japan. With our partners we are acting close and trustful since this. We are aiming to do similar with new partners abroad. In 1981 we started to sell **compressed air bags/cushions**. Since 2002 we added **lifting bags “HEAVY DUTY”** to our programme. In total we are covering the following:

1. Elastomertechnology “From One Hand” (visit our homepage and click “Downloads.EN”):

- **TRACOpres ECOcushions** as machine- and/or assembling elements; function like single acting pneumatic cylinders (short-stroke-cylinders). High power in minimal gaps = 8 - 17 mm. Up to 8 bar working pressure. Max. temperature: 100°C. Long lifetime.
- **TRACOpres VULCANcushions** = hot vulcanized lifting bags of different shapes and sizes as to special customer’s design. Max. temp.: 140°C.
- **TRACOpres VTRcushion** = very thin cushions for extremely small built-in height. Thickness from 2 mm.
- **Pneumatic lifting bags “HEAVY DUTY”**, Kevlar(aramid fabric)-reinforced, for industrial and governmental (fire brigades, rescue, military) use. For special requirements we provide individual executions. Also available as Platform lifting bags with defined surface in touch.
- **Flexible Tanks** for different media, liquids or gases. Max. volume: 1.000 m³.
- **Flow Stoppers** up to 3.000 mm diameter for use in pipings/tubings to inter-rupt flow, i.e. for repair, maintenance. Also in T-shape. **Anti-pollution stoppers** and **drainage cores**. **Manhole seals** for airtests in sewer lines. **Leak sealing systems**.
- **Elastomer Engineering** covering special design with air/liquid inflated elastomer materials for **engineering, inflatable water- and oiltanks, rescue** and (passive) **military** use.

2. Spare parts of German high precision to improve your machine tools:

- **Machine elements** for machine tools etc.
- **Shaft-hub-connectors**, like Ringfeder, Spieth, TAS Schäfer or others.
- **V-Rings, O-rings** and special O-rings, Forsheda, Simrit or other manufacturers.
- **Other machine tool’s spare parts**, due to your special requirements
